Election/Restrictions

1. Claims 1 and 24-29 are allowable. Claims 2-8 and 21-23, previously withdrawn from consideration as a result of a restriction requirement, require all the limitations of an allowable claim. Pursuant to the procedures set forth in MPEP § 821.04(a), **the restriction requirement among inventions I-VIII, as set forth in the Office action mailed on 07/23/04, is hereby withdrawn** and claims 2-8 and 21-23 hereby rejoined and fully examined for patentability under 37 CFR 1.104. In view of the withdrawal of the restriction requirement, applicant(s) are advised that if any claim presented in a continuation or divisional application is anticipated by, or includes all the limitations of, a claim that is allowable in the present application, such claim may be subject to provisional statutory and/or nonstatutory double patenting rejections over the claims of the instant application. Once the restriction requirement is withdrawn, the provisions of 35 U.S.C. 121 are no longer applicable. See *In re Ziegler*, 443 F.2d 1211, 1215, 170 USPQ 129, 131-32 (CCPA 1971). See also MPEP § 804.01.

EXAMINER'S AMENDMENT

2. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a communication with David A. Fanning (Reg. No. 33,233) on 11/06/07. The application has been amended as follows:

Art Unit: 3724

In the claims:

In claim 7, lines 2-3, "and where the step of identifying includes identifying contact" has been changed to --and further comprising identifying contact--.

Reasons for Allowance

3. The following is an examiner's statement of reasons for allowance: The claims are allowable because prior art fails to teach the step of providing a first electrode electrically coupled to the person, and the step of sampling the signal a plurality of times within 20 microseconds to determine if the signal has at least one predetermined characteristic indicative of contact between a person and the dangerous portion in combination with other steps set forth in claim 1. The prior art also fails to teach the step of providing a first electrode electrically coupled to the person, and the step of sampling the signal a plurality of times to determine if the signal has at least one predetermined characteristic indicative of contact between a person and the dangerous portion, as set forth in claim 29. See pages 6-7 in the decision on appeal by the Board of Patent Appeals and Interferences mailed on 09/27/07.

None of these references by themselves or in combination with the other prior art cited teach the claimed invention set forth in claims 1 and 29.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
